

About RIT

RIT Capital Partners plc (RIT) is listed on the London Stock Exchange's FTSE 250 Index and is one of the UK's largest investment trusts. RIT is managed by its wholly-owned subsidiary, J. Rothschild Capital Management Limited (JRCM).

Our purpose is to grow your wealth meaningfully over time, through a diversified and resilient global portfolio. RIT is therefore best thought of as a core diversifier and part of a portfolio's global equity exposure.

NAV Commentary

RIT's unaudited diluted NAV as at 31 May 2026 (with debt at fair value) was 3,030p per £1 ordinary share (30 April 2026: 2,970p), +2.0% for the month.

YTD to 31 May, RIT's NAV per share total return is +4.5%.

Global equities continued their narrow rally in May, extending the recent period of strength driven primarily by AI related names and in particular, the semiconductor sector.

Against this backdrop, our globally diversified portfolio delivered a positive return for the month. All three investment pillars – Quoted Equities, Private Investments and Uncorrelated Strategies – contributed positively. Private markets saw significant activity, with notable fundraising rounds across the technology sector. Our exposure to technology and especially AI is expressed primarily through our Private Investments pillar. We believe the portfolio is positioned to benefit from further uplifts in private market valuations and potential liquidity events such as the upcoming SpaceX IPO.

- Quoted Equities contributed positively to performance, led by emerging markets and Europe, partially offset by Japan. Upside participation was constrained, reflecting our preference to express the technology theme through private markets instead.
- Private Investments generated positive returns, supported by the receipt of further Q1 fund valuations and a meaningful contribution from the direct portfolio. During the month, we added to our positions in Anthropic and Databricks, two high-conviction holdings – both having completed new funding rounds at valuations above those previously reflected in our NAV. Our participation in these funding rounds resulted in an uplift to the carrying values at which we previously held both investments, with Anthropic contributing meaningfully.
- Uncorrelated Strategies' positive returns were driven by strong performance from our macro managers, partially offset by our soft commodity and gold exposures. We took the opportunity to exit our position in oil, initiated in February ahead of the Middle East conflict, crystallising gains following the subsequent rise in oil prices.
- Performance in May was further supported by the weakening of sterling against the US dollar.

During the month we repurchased £6.7m or approximately 300,000 RIT shares.

A distinctive approach

Our key differentiators are our unrivalled network, internal expertise and flexible investment mandate. These enable us to source and underwrite high-quality, often hard-to-access investments, and implement them in a capital efficient way across asset classes and geographies.

Long-term investing

Above all, our approach is long term. We aim to deliver compelling growth through market cycles and superior long-term performance, with less risk than equity markets.

A well-balanced, unique portfolio

Each of our investments is meticulously chosen, structured and monitored to create a unique, high-conviction, balanced portfolio. Where every position matters but none has a disproportionate impact on returns. And where returns compound over time.

Our global portfolio is diversified across three primary strategic pillars - Quoted Equities, Private Investments and Uncorrelated Strategies - always with a long-term view and focus on risk management.

Risk warnings

Please refer to page five for important information regarding risk warnings.

Performance since inception

£10,000 invested in RIT at inception in 1988 would be worth ~£451,000 today (with dividends reinvested) compared to the same amount invested in the ACWI (50% £)⁴ which would be worth ~£193,000.

A well-balanced, diversified portfolio across three main pillars

Quoted Equities

Diversified, global strategies held directly through stocks, as well as public equity funds.

We target diversified, global investments in listed equity markets, aiming for returns that outperform relevant equity market indices. We source these investments either directly through our in-house investment expertise or through our network and specialist external managers.

30 – 60% NAV

Long-term allocation range

Private Investments

Investments in private markets, held through both direct investments and specialist managers.

We target investments in private markets, aiming to generate double-digit compound returns over the long term. These investments have been a compelling source of returns, and typically structured to provide some downside protection.

20 – 40% NAV

Long-term allocation range

Uncorrelated Strategies

A mix of strategies which aim to generate consistent returns in different market conditions, with a lower correlation to equity markets across the cycle.

Underlying investments in this pillar are in traded instruments primarily focused on absolute return strategies (including market neutral and macro managers), credit investments, and some real assets and government bonds. We access most of these strategies through specialist external managers or co-investments.

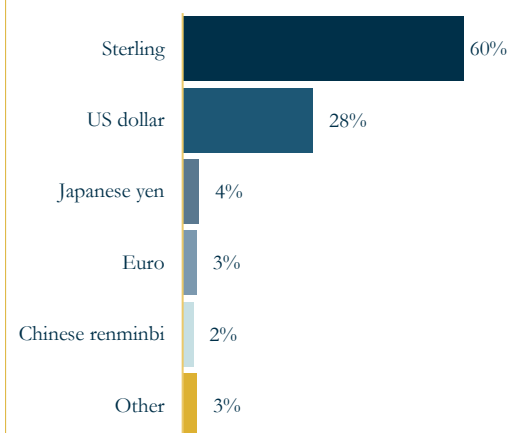

20 – 40% NAV

Long-term allocation range

Footnotes:

1. As of 31 May 2026. The since inception return is calculated using the NAV per share and closing share price at 2 August 1988, with dividends reinvested.
2. All Total return performance figures are with dividends reinvested.
3. Using 30 April 2026 CPI data.
4. The ACWI refers to the MSCI All Country World Index and is calculated using 50% of the index measured in sterling and 50% measured in a sterling-hedged ACWI. The sterling-hedged ACWI is used as it incorporates hedging costs, which the portfolio also incurs, to protect against currency risk. It is applied from 1 January 2015 (from when it is readily available), and prior to this date it uses the index measured in local currencies.

5. Before December 1998, when total return indices were introduced, the index is measured using a capital-only version.
5. Included in Quoted Equity stocks and excluded from Private Investments funds is an adjustment of 4.0%, representing an estimate of publicly-traded equities held indirectly in private investment funds, based upon the latest available fund valuations as at March 2026.
6. As of 31 December 2025. This is RIT's own ongoing charges figure (OCF), calculated based on recommendations from the Association of Investment Companies and excluding performance-related amounts as well as costs incurred within third-party funds. Refer to p.133 in the 2025 Annual Report and Accounts (ARA) for further detail.
7. Gearing is calculated in accordance with AIC guidance as total assets,

8. As at 31 May, 97% of the funds portfolio was held at 31 March valuations, 2% at 31 December and 1% at 30 September valuations.
9. Excluding currency options.
10. Excludes the notional exposure from derivatives. When factoring in the exposure from equity futures and equity swaps, the exposure to Europe, Global and North America increases by 2%, 2% and 1%, respectively.

**Risk warnings**

Past performance is no indication of future performance. The price of shares and income from them can rise and fall so investors could get back less than they originally invested or nothing at all. Net Asset Value (“NAV”) performance is not the same as share price performance and investors may not realise returns in line with NAV performance. Exchange rate changes may cause the value of underlying overseas investments to go down as well as up. This document may contain forward-looking statements with respect to the financial condition, performance and position, strategy, results of operations and businesses of RIT. Such statements are based on current expectations and assumptions and involve known and unknown risks and uncertainties.
